

Webinar July 6th

Air Hitches For Smoother Rides

1

Overview

- Air Safe Hitches (5th Wheel, Gooseneck, and Receiver)
- “True Air” Makes The Difference
- Hitches totally ride on the air bags (*no hinges except the Class 3 Rec*)
- Air Safe Hitches delivers the ultimate in safety.

2

Features & Benefits

- **Safety** - With Air Ride Hitches only 10% of the trailer inertia transfers compared to 100% using a hard connection hitch giving you ultimate control.
- **Ultimate Control** - The tow vehicle and trailer independently giving you greater control and added safety, virtually eliminating all sway. Greatly increased braking control since all the weight on the tow vehicle and trailer is distributed evenly giving you increased positive contact when braking and maneuvering.

3

Features & Benefits

- **Saves You Money** - Reduce trailer and content fatigue. Metal fatigue caused by traditional towing results in your trailer and its contents taking a beating. Air Hitch products increase life and help hold value.
- **Arrive Alive** - Reduce driver fatigue to help ensure everyone (family, friends, pets, horses, and livestock) arrive alive.

4

Features & Benefits

- **Safeguards Against Uncontrollable Road Conditions -** Bumps, potholes, expansion joints, curves, hills, and other drivers can be a hazard. Air Hitch keeps you under control when confronted with these conditions.
- **Saves Gas and Tire Wear -** The 90% smoother ride allows you to glide instead of bounce increasing gas mileage and tire wear.

5

Types of Trailers

- **Horse Trailers**
- **Concession Trailers**
- **5th Wheel Trailers**
- **Travel Trailers**
- **Cargo Trailers**
- **Race Car Trailers**
- **Boat Trailers**
